

Limited Slip Differential

Why should I buy KLEEMANN Limited Slip Differential

Overflow of engine power is no good if it can't be transformed into wheel traction. Therefore KLEEMANN has developed a Limited Slip Differential with a locking mechanism, available for numerous models.

With perfect traction, both wheels turn at equal speed. In slippery conditions, or when excessive power is transferred, one wheel turns faster than the other. KLEEMANN LSD ensures that power is not only transferred to one wheel, but to both wheels.

KLEEMANN LSD gives an immediate result and are available for numerous V6, V8 and V12 models

Selling Points

- **Improved acceleration from 0-60 mph, up to 0.5 seconds.**
- **Improved handling on road or track**
- **Minimizes ESP function**
