

The KLEEMANN Super Sport Camshafts

Why should I buy KLEEMANN Super Sport Camshafts

KLEEMANN Super Sport Camshafts are specifically designed for forced induction engines.

Torque and horsepower are increased in the mid and upper rev range of the current Mercedes-Benz V6 and V8 engines.

Although designed with forced induction engines in mind, a normally aspirated engine would also benefit from the camshafts and could gain up to 10% in torque and horsepower.

KLEEMANN Super Sport Camshafts are forged from a billet of high quality steel and do not affect idle characteristics. KLEEMANN Camshaft design optimizes the intake and exhausts valve opening and closing time, and increases the power of the engine. KLEEMANN Camshafts are designed to provide optimal power for the given application, and the most usable torque throughout the entire RPM band.

Selling Points

- Specifically designed for KLEEMANN Kompressor systems
- Increase in power and torque in the mid and upper rev range
- No affect on idle behaviour
- High quality camshafts.
