

## **Why should I buy the KLEEMANN Suspension?**

Performance suspensions are often too harsh for everyday street use. Stiff springs and dampers may provide excellent handling on the race track, but seldom provide the comfort required for street use.

KLEEMANN Speed Sensitive Sport Suspension systems utilize CNC precision wound springs that are shot peened, phosphate treated and powder coated. KLEEMANN springs are true progressive rate springs, providing a comfortable ride while reducing body roll and lowering the vehicles center of gravity.

KLEEMANN dampers are unlike any other damper available. High pressure nitrogen gas charge and Variable Aperture technology allows a damper to have a variety of compression and rebound rates. The quicker and farther the damper is compressed, the stiffer it becomes.

The end result is a suspension that performs like no other. KLEEMANN Speed Sensitive Sport suspensions have a comfortable ride on the street, while providing unmatched handling dynamics during spirited driving. KLEEMANN Speed Sensitive Sport suspensions provide a smooth and predictable feedback to the driver. Whether on the street or Turn 9 at Willow Springs, KLEEMANN Speed Sensitive Sport suspensions provide superior handling, feedback and comfort.

### **Selling points**

- Progressive springs provide comfort during city driving yet provide outstanding handling during sporting driving
- Variable valve technology in shocks provides multiple compression/rebound rates
- Lowers CG of car for improved handling
- Styling
- Performance without sacrificing comfort
